Sujen Kancherla

(916)-896-6761 | sujenk@gmail.com | linkedin.com/in/sujen | github.com/sujen07

Summary

Passionate AI/Machine Learning Engineer with a strong foundation in deep learning, computer vision, and natural language processing, and agentic workflows. I aspire to be part of something large-scale with a positive impact.

Technical Skills

Programming Languages: Python, typescript, SQL,

Frameworks: TensorFlow, PyTorch, TensorFlow, langgraph, ReactJS, NextJS

Libraries & Tools: OpenCV, NLTK, Git, Docker, AWS, Google Cloud

Notable Projects

AI Calendar Assistant — Jan 2025 – present
Startup Company, Agentic AI — *NextJS, SQL, TypeScript, LanggraphJS*

- created calendar website with personal assistant to manage schedules
- used langraph to maintain agentic workflow for asssitant and created CRUD API's for data
- Calendar App

Image Resolution Enhancer — Jun 2024 – Aug 2024
Deep Learning Project — *Python, Pytorch, OpenCV*

- Developed an end-to-end system for enhancing resolution of images by 4x pixels
- Achieved state-of-the-art performance on DIV2K dataset

AI Chess and Tic Tac Toe — Jan 2024 – Feb 2024
Graph Theory — *Python, pygame*

- Used a n-ary tree structure and minimax algorithm to search for optimal moves
- used pygame to make the AI playable in a GUI

For more projects, check out my GitHub: github.com/sujen07

Experience

AI/ML Engineer — Jan 2025 – *present*
AMD — *Folsom, United States*

- Implemented ML algorithms to identify likely error producing regression testing workloads
- Started agentic workflows to assist with debugging
- created various automation scripts to reduce manual effort in validation

AI Graduate Researcher — Jul 2024 – December 2024
UCSD ARCLab — *La Jolla, CA*

- Deployed Reinforcement Learning algorithms to perform human tissue cutting
- Used robomimic framework in isaac-sim to train reinforcement learning model for robot to cut tissue

AI/ML Intern — Jan 2023 – June 2023
Omnisync INC — *La Jolla, United States*

- developped an end-to-end pipeline for a semantic search query
- used REST APIs to pull and maintain over 7 million rows of data
- used text embeddings and vector search to enable semantic searching

Data Science Intern — June 2022 – Sep 2022
Intel — *Folsom, United States*

- automated performance testing for data center graphics cards
- used bash scripting and python and outputted performance and power metrics data
- performed data analysis on GPU temperature/performance data on a variety of workloads

Education

University of California, San Diego — La Jolla, CA
M.S. in Machine Learning, Electrical Engineering — *Sep 2024 – Jun 2026*

University of California, San Diego — La Jolla, CA
B.S. in Data Science — *Sep 2021 – June 2024*
